Index to ASME Transactions

Volume 77, 1955

The ASME Transactions for 1955 was issued in January, February, April, May, July, August, October, and November, 1955.

The Society Records for the year 1954 appeared as supplements, two in February, 1955, and the index section in January, 1955.

The page numbers for these supplements are designated by the symbol SR, and the February supplement contains its own index.

(AC) denotes author's closure; (BR) book review; (D) discussion of a paper.

Electrical Measurements for Power Circuits (Part 6, Instruments and Apparatus section)

How to Find Papers Presented at 1955 ASME Meetings

HE technical programs of the meetings of the Society and of THE technical programs of the inceeding published in Mechanical Engineering and may be located by consulting the index on pages SR-101 to SR-126. Many of these papers will be published in Mechanical Engineering or the Transactions (including the Journal of Applied Mechanics) and may be located by reference to the indexes of these publications.

Publications Developed by the **Technical Committees**

HE Society's technical committees, the first of which was THE Society's technical committees, the society of the con-organized many years ago and all of which have been continuously at work on codes, standards, research, and other special reports, have developed a series of publications of permanent value to the membership. The following list is presented here for record and for ready reference. This list covers the works of these committees together with dates of publications and prices. A discount of 20 per cent is allowed to ASME members on all publications except where otherwise noted.

ASME AMERICAN STANDARDS
